2. Rear Wing Installation

- 2.1. Verus is not responsible for damage to you or your vehicle by following this manual and/or installing Verus Engineering products
- 2.2. We begin at the rear of the car. We need to remove the plastic cover on the underside of each side of the wing. This is shown below.

- 2.3. Do so by removing the Philips head screw.

Honda Civic Type R Rear Wing Kit – Install Manual

2.4. Remove the two Torx bolts shown below on each side of the wing.

2.5. To remove the wing, pull outward on the factory upright and pull up and out on the rear wing. Below is a photo with the factory wing removed.

2.6. With the OE wing removed, we can install our upgraded wing in place. Do so in reverse order by placing one side on the mount and pulling outward on the other upright.

Honda Civic Type R Rear Wing Kit – Install Manual

- 2.7. Install supplied M6 bolts and washers into the rear wing as shown below. Loosely install all (4) bolts before tightening.

- 2.8. Tighten the M6 bolts to 4-6 ft-lbs.
- 2.9. Utilizing a 50/50 mix of isopropyl alcohol and water, we can clean the rear wing covers.
- 2.10. It is ***highly*** recommended to follow 3M's VHB install instructions, which are listed in these steps below. The ambient temperature should be over 50 degrees F. 50% of the ultimate bond strength will be achieved after 20 minutes, 90% after 24 hours, and 100% after 72 hours
- 2.11. Install the double sided tape as shown below.

Honda Civic Type R Rear Wing Kit – Install Manual

- 2.12.** We can now install these covers as shown below. Firmly press these into the wing to get proper adhesion.

- 2.13.** This concludes the P10 rear wing install. With the rear wing installed, you will notice a bump in rear downforce. Please send any comments, concerns, questions, and general feedback to Verus Engineering via sales@verus-engineering.com.
